

## Tourist Guide **ATR/ATT 400**

The Albrecht Tourist Guide devices are optimal for tourist applications such as group tours, city tours, shore excursions on cruises, bus tours and many more.

The Albrecht transmitters and receivers are also used in museums and for guided tours of factories when it comes to communication between guide and participants.

The handy devices in mini format guarantee crystal-clear reception thanks to the 2.4 GHz ISM band technology that can be used throughout Europe.

The Albrecht communication system can be flexibly combined with a transmitter and any number of receivers. For the receiver, you can choose between the wired ATR 400 or the wireless ATR 430.
